Kelas : TI-24-PA1

Mata Kuliah : Lab. Pemrograman Perangkat Bergerak

Tugas : Pertemuan 6 – Tugas dan Latihan

Github : <https://github.com/RicoSteven120206/PPB-Praktikum-242310037.git>

Latihan 1: Membuat Struktur Drawer Navigasi

Buatlah kontainer `_layout.jsx` untuk mengatur halaman agar mekanisme menu dalam bentuk side-menu.

⇒ Berikut Source Code untuk membuat container `_layout` pada Drawer Navigasi

Source Code `main-apps/_layout.jsx`

```
import { Ionicons } from "@expo/vector-icons";
import { Drawer } from "expo-router/drawer";
import { GestureHandlerRootView } from "react-native-gesture-handler";
import CustomDrawerContent from "../../components/praktikum-6/CostumDrawerContent";
import { color_list } from "../../components/styles/StyleApps";

export default function DrawerLayout() {
  return (
    <GestureHandlerRootView style={{ flex: 1 }}>
      <Drawer
        drawerContent={(props) => <CustomDrawerContent {...props} />}
        screenOptions={{
          headerShown: true,
          headerStyle: { backgroundColor: color_list.green },
          headerTintColor: "#fff",
          headerTitleStyle: { fontWeight: "700" },
          drawerActiveTintColor: color_list.green,
          drawerInactiveTintColor: "gray",
          drawerActiveBackgroundColor: color_list.green_light,
        }}
      />
    </GestureHandlerRootView>
  );
}
```

```

        drawerLabelStyle: { fontSize: 14, fontWeight: "600" },
      }}
    >
    <Drawer.Screen
      name="(tabs)"
      options={{
        drawerLabel: "Katalog Buku",
        title: "E-Catalog Buku",
        drawerIcon: ({ color, size }) => (
          <Ionicons name="home-outline" size={size} color={color} />
        ),
      }}
    />
    <Drawer.Screen
      name="premium"
      options={{
        drawerLabel: "Premium Membership",
        title: "Premium Membership",
        drawerIcon: ({ color, size }) => (
          <Ionicons name="star-outline" size={size} color={color} />
        ),
      }}
    />
    <Drawer.Screen
      name="map-search"
      options={{
        drawerLabel: "Pencarian Peta",
        title: "Pencarian Berbasis Peta",
        drawerIcon: ({ color, size }) => (
          <Ionicons name="map-outline" size={size} color={color} />
        ),
      }}
    />

```

```

        </Drawer>

        </GestureHandlerRootView>

    );
}

```

Source Code praktikum-6/CostumDrawerContent.jsx

```

import { Ionicons } from "@expo/vector-icons";
import {
    DrawerContentScrollView,
    DrawerItemList,
} from "@react-navigation/drawer";
import { Text, View } from "react-native";
import { color_list } from "../../components/styles/StyleApps";

export default function CustomDrawerContent(props) {
    return (
        <DrawerContentScrollView {...props}>
            <View
                style={{
                    padding: 20,
                    backgroundColor: color_list.green,
                    marginBottom: 10,
                }}
            >
                <View
                    style={{
                        width: 60,
                        height: 60,
                        borderRadius: 30,
                        backgroundColor: "#fff",
                        justifyContent: "center",
                        alignItems: "center",
                        marginBottom: 10,
                    }}
                >

```

```

>
  <Icons name="book" size={30} color={color_list.green} />
</View>
<Text style={{ color: "#fff", fontSize: 18, fontWeight: "bold" }}>
  E-Catalog Buku
</Text>
<Text style={{ color: "#e2e8f0", fontSize: 12 }}>
  Baca. Jelajahi. Temukan.
</Text>
</View>
<DrawerItemList {...props} />
</DrawerContentScrollView>
);
}

```

Latihan 2: Tentukan Halaman Apa Saja Yang Akan Dibungkus Oleh Drawer

Buatlah minimal 3 buah menu pada kontainer Drawer. Masing-masing menu menampilkan informasi terkait mengenai e-catalog buku.

⇒ Pada isi container Drawer membuat beberapa Fitur Sidebar untuk menampilkan informasi terkait E-Catalog Book, berikut Source Code pada Pembuatannya

Source Code dari main-apps/_layout.jsx

```

<Drawer
  drawerContent={({props}) => <CustomDrawerContent {...props} />}
  screenOptions={{
    headerShown: true,
    headerStyle: { backgroundColor: color_list.green },
    headerTintColor: "#fff",
    headerTitleStyle: { fontWeight: "700" },
    drawerActiveTintColor: color_list.green,
    drawerInactiveTintColor: "gray",
    drawerActiveBackgroundColor: color_list.green_light,
    drawerLabelStyle: { fontSize: 14, fontWeight: "600" },
  }}
>

```

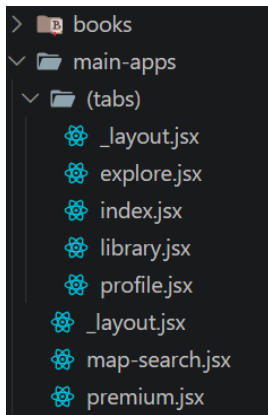

```
<Drawer.Screen
  name="(tabs)"
  options={{
    drawerLabel: "Katalog Buku",
    title: "E-Catalog Buku",
    drawerIcon: ({ color, size }) => (
      <Icons name="home-outline" size={size} color={color} />
    ),
  }}
/>

<Drawer.Screen
  name="premium"
  options={{
    drawerLabel: "Premium Membership",
    title: "Premium Membership",
    drawerIcon: ({ color, size }) => (
      <Icons name="star-outline" size={size} color={color} />
    ),
  }}
/>

<Drawer.Screen
  name="map-search"
  options={{
    drawerLabel: "Pencarian Peta",
    title: "Pencarian Berbasis Peta",
    drawerIcon: ({ color, size }) => (
      <Icons name="map-outline" size={size} color={color} />
    ),
  }}
/>

</Drawer>
```

Berikut untuk isi Directory untuk Sidebar/Drawer Navigasi content.

Berikut Source Code untuk Setiap Tampilan dari Drawer untuk menampilkan Informasi terkait dengan Buku.

Source Code dari main-apps/map-search.jsx

```
import { Ionicons } from "@expo/vector-icons";
import { Text } from "react-native";
import { SafeAreaView } from "react-native-safe-area-context";
import { color_list, styles } from "../../components/styles/StyleApps";

export default function MapSearchScreen() {
  return (
    <SafeAreaView style={[styles.container, { justifyContent: "center",
alignItems: "center" }]}>
      <Ionicons name="map" size={64} color={color_list.green} />
      <Text style={{ fontSize: 20, fontWeight: "bold", marginTop: 15, textAlign:
"center" }}>
        Pencarian Berbasis Peta
      </Text>
      <Text style={{ color: "gray", textAlign: "center", marginTop: 8,
paddingHorizontal: 30 }}>
        Temukan perpustakaan atau toko buku terdekat berdasarkan lokasi Anda
saat ini.
        Fitur ini akan menampilkan peta interaktif dengan marker lokasi
rekomendasi.
      </Text>
```

```
    </SafeAreaView>

  );
}
```

Source Code dari main-apps/premium.jsx

```
import { AntDesign } from "@expo/vector-icons";
import { useRouter } from "expo-router";
import { FlatList, Image, Text, TouchableOpacity, View } from "react-native";
import { SafeAreaView } from "react-native-safe-area-context";
import { color_list, styles } from "../../components/styles/StyleApps";
import ListBook from "../../constants/list_book";

export default function PremiumScreen() {
  const router = useRouter();
  const premiumBooks = ListBook.filter((book) => !book.is_free);

  return (
    <SafeAreaView style={styles.container}>
      <View style={{ padding: 15, backgroundColor: color_list.green,
borderRadius: 12, marginTop: 10 }}>
        <Text style={{ color: "#fff", fontSize: 20, fontWeight: "bold" }}>
          Nikmati Semua Buku Premium
        </Text>
        <Text style={{ color: "#e2e8f0", marginTop: 5 }}>
          Berlangganan untuk akses tak terbatas ke {premiumBooks.length} judul
          eksklusif.
        </Text>
      </View>

      <FlatList
        data={premiumBooks}
        keyExtractor={(item) => item.id.toString()}
        contentContainerStyle={{ paddingVertical: 15 }}
        renderItem={({ item }) => (
```

```

        <TouchableOpacity
          style={{
            flexDirection: "row",
            backgroundColor: "#fff",
            borderRadius: 10,
            padding: 10,
            marginBottom: 10,
          }}
          onPress={() => router.push(`/books/${item.id}`)}
        >
          <Image source={item.img} style={{ width: 60, height: 80, borderRadius:
6 }} />
          <View style={{ marginLeft: 10, flex: 1, justifyContent: "center" }}>
            <Text style={{ fontWeight: "bold" }}>{item.title}</Text>
            <Text style={{ color: "gray", fontSize: 12 }}>{item.author}</Text>
            <View style={{ flexDirection: "row", alignItems: "center", marginTop:
4 }}>
              <AntDesign name="crown" size={14} color={color_list.orange} />
              <Text style={{ marginLeft: 4, fontSize: 12 }}>Premium</Text>
            </View>
          </View>
        </TouchableOpacity>
      )}
    />
  </SafeAreaView>
);
}

```

Latihan 3: Mengirimkan Parameter Antar Screen

Buatlah halaman detail buku pada semua item buku yang tersedia, dan tampilkan detail informasi buku tersebut seperti contoh digambar ini:

⇒ Berikut Source Code untuk membuat tampilan Detail Buku berdasarkan params ID dari List Book untuk mengenai detail informasi buku.

Source Code dari app/books/[id].jsx

```
1 export { default } from "../../components/books/detail";
2
3
```

```
import { Ionicons } from "@expo/vector-icons";
import { useLocalSearchParams, useRouter } from "expo-router";
import {
  Image,
  ScrollView,
  StatusBar,
  StyleSheet,
  Text,
  TouchableOpacity,
  View,
} from "react-native";
import { SafeAreaView } from "react-native-safe-area-context";

import ListBook from "../../constants/list_book";

export default function BookDetailScreen() {
  const { id } = useLocalSearchParams();
  const router = useRouter();

  const book = ListBook.find((b) => b.id.toString() === id);

  if (!book) {
    return (
      <SafeAreaView style={[styles.container, styles.centerAll]}>
        <Text style={styles.errorText}>Buku tidak ditemukan</Text>
        <TouchableOpacity
          onPress={() => router.back()}
          style={{ marginTop: 20 }}
        >

```

```

    >
    <Text style={{ color: "white" }}>Kembali</Text>
  </TouchableOpacity>
</SafeAreaView>
);
}

return (
  <SafeAreaView style={styles.container}>
    <StatusBar barStyle="light-content" backgroundColor="#1a2228" />

    <View style={styles.header}>
      <TouchableOpacity
        onPress={() => router.back()}
        style={styles.circleBtn}
      >
        <Icons name="arrow-back" size={24} color="#2D3748" />
      </TouchableOpacity>
      <View style={styles.headerRight}>
        <TouchableOpacity style={styles.circleBtn}>
          <Icons name="heart" size={24} color="#E2E8F0" />
        </TouchableOpacity>
        <TouchableOpacity style={styles.circleBtn}>
          <Icons name="share-social" size={22} color="#2D3748" />
        </TouchableOpacity>
      </View>
    </View>

    <ScrollView
      showsVerticalScrollIndicator={false}
      contentContainerStyle={styles.scrollContent}
    >
      <Image source={book.img} style={styles.coverImage} />

```

```

<Text style={styles.title}>{book.title.toUpperCase()}</Text>
<Text style={styles.author}>{book.author}</Text>

<View style={styles.ratingRow}>
  <Icons name="star" size={16} color="#EAB308" />
  <Text style={styles.ratingText}>{book.rating} / 5.0</Text>
</View>

<View style={styles.synopsisBox}>
  <Text style={styles.synopsisLabel}>SINOPSIS</Text>
  <Text style={styles.synopsisText}>{book.sinopsis}</Text>

  {book.story && (
    <
      <Text style={[styles.synopsisLabel, { marginTop: 20 }]}>
        STORY
      </Text>
      <Text style={styles.synopsisText}>{book.story}</Text>
    </>
  )}
</View>
</ScrollView>

<View style={styles.footer}>
  {book.is_free ? (
    <TouchableOpacity style={[styles.btnAction, styles.btnFree]}>
      <Icons name="book-outline" size={20} color="#1E293B" />
      <Text style={styles.txtFree}>Read Book</Text>
    </TouchableOpacity>
  ) : (
    <TouchableOpacity style={[styles.btnAction, styles.btnPremium]}>
      <Icons name="card-outline" size={20} color="#FFF" />

```

```
        <Text style={styles.txtPremium}>Subscribe</Text>
      </TouchableOpacity>
    )}
  </View>
</SafeAreaView>
);
}
```

```
const styles = StyleSheet.create({
  container: {
    flex: 1,
    backgroundColor: "#1a2228",
  },
  centerAll: {
    justifyContent: "center",
    alignItems: "center",
  },
  errorText: {
    color: "#FFF",
    fontSize: 18,
    fontWeight: "bold",
  },
  header: {
    flexDirection: "row",
    justifyContent: "space-between",
    paddingHorizontal: 20,
    paddingTop: 10,
    paddingBottom: 20,
  },
  headerRight: {
    flexDirection: "row",
    gap: 15,
  },
});
```

```
circleBtn: {
  width: 44,
  height: 44,
  borderRadius: 22,
  backgroundColor: "#FFF",
  justifyContent: "center",
  alignItems: "center",
},
scrollContent: {
  alignItems: "center",
  paddingHorizontal: 20,
  paddingBottom: 40,
},

  backgroundColor: "#FFF",
},
txtFree: {
  color: "#1E293B",
  fontSize: 18,
  fontWeight: "bold",
},
});
```

Latihan 4: Laporan Singkat

1. Buatlah dokumentasi dalam mengerjakan soal Latihan 1 hingga Latihan 3, dengan memberikan Screenshot baik dari sisi aplikasi ataupun code yang sudah dimodifikasi dengan penjelasan dan alur yang baik dan benar. Dokumentasi disimpan dalam bentuk PDF dan ditaruh dalam project react expo yang telah anda kerjakan.

⇒ Dokumentasi pada Output Dari Pengerjaan

Berikut Output dari Detail Buku [id].jsx

2. Upload project tersebut pada GITHUB yang telah dibuat sebelumnya di repository "PPB-Praktikum-NPM", namun commit dengan nama "Tugas Praktikum-6".
3. Pengumpulan Tugas Latihan Praktikum dikumpulkan selama 1 minggu kedepan sejak hari ini (sesuai dengan jadwal praktikum).
